

It Works

**A solid state quartz system that prevents paraffin and scale deposition for over a decade !!!
100's of installed applications and testimonials that back the tools performance !!!**

PROBLEM

You need to keep wellbore fluids moving. You need to maximize output and keep operating costs to a minimum. And you always need to maximize productivity. Yet paraffin and scale deposition stops you from getting the most out of your wells.

Paraffin and scale deposition cost big dollars! And hot oiling your wells is not the answer.

Hot oiling costs you both money and production time. Worst of all, it damages your

producing reservoirs. Chemical programs or batch treatments are just as expensive and often make problems worse. Why should you put up with never-ending pump changes, shut-ins, production declines and rod hang-ups? Why bother, when ENERCAT™ solves all these common problems ?

SOLUTION

ENERCAT™ puts technology to work for you. This leading edge, self contained system prevents any deposition of paraffin or scale from the moment the fluids enter the wellbore until completely beyond the wellhead.

ENERCAT™ is easily installed and has proven to be effective time and time again. Most important, ENERCAT™ is non-magnetic and non-radioactive. Using ENERCAT™ not only eliminates hot oiling or chemical treatments; it reduces lost production time due to paraffin and scale problems.

The results:

1. increased production,
2. reduced operating costs,
3. increased equipment life and efficiency, and
4. clean production tubing and wellhead.
